

Characteristics:

The Swinging decanter EVERLASTING, is used for the clarified water evacuation in concrete or metallic decanting tanks of the following shapes

- Square tanks
- Rectangular tanks
- Circular tanks

The Swinging decanter Dbm-009, can be used with anyone of the following drives,

- Electrical drive by stem
- Electrical drive by cable
- Floating by buoys

The Swinging decanter EVERLASTING in its motorized versions, normally stay in standby mode above water level. Once it receives the operation signal it descends slowly at the same time as it evacuates clarified waters and it obliges the scum to be evacuated forcing it to continue their process for later elimination.

The Swinging decanter EVERLASTING in its motorized versions has a sensor in the end which indicates to the equipment the regulation and necessary reduction so that the equipment descends based on the existing water level.
